

Mack® Custom Specialty Products

Built just for you.

We believe the customer is the foundation of our business, which is why we've always built trucks that are durable and dependable to help you succeed. But did you know we manufacture trucks customized for your precise needs, straight from the factory. Below we highlight the five most customized trucks, but they are just a small sample of what Mack can build for you. So the next time you need just the right trucks for very specific applications, insist on an expert solution from Mack.

Five-axle, short-wheel-base Granite® Dump.

Also known as a Wisconsin Dump, this five-axle Granite dump truck is built to accommodate extreme payloads in specific states that allow higher gross hauling weights. To accommodate the five axles, all air tanks are positioned inside the frame rails allowing a short wheel base and creating a tighter turning radius, ultimately increasing maneuverability.

All-wheel drive Granite mixer.

Used for severe-duty applications, this all-wheel drive Granite mixer allows drivers to easily navigate through difficult terrain. This configuration has a limited slip differential to provide substantially better traction.

Tri-drive Granite tractor.

For better traction in both on- and off-road applications, this tri-drive Granite tractor is the perfect solution. This customization utilizes all three axles as drive axles. There is no lift axle, providing superior weight distribution and meeting Canadian regulations.

Granite snowplow.

Powered by the Mack MP™ Engine Series, this Granite snowplow can be equipped with hood hatches for easy servicing even while the plow is attached. It features a 20-inch parent frame rail front extension. It uses the advanced Road Watch® temperature gauge to read ambient air and road temperatures. It is outfitted with a heated, tinted windshield and mirrors, and its newly designed HVAC system keeps the cab comfortable and the windows fully defrosted in the most inclement conditions.

Granite mixer with Road Stability Advantage.

Granite mixers with Road Stability Advantage by BENDIX® are equipped with its top-of-the-line ABS stability system (6S 6M) capable of recognizing and assisting with both potential rollover forces and vehicle under- and over-steer driving situations under a variety of road conditions. The Mack RSA system helps to mitigate loss of control by selectively applying vehicle brakes, as well as dethrottling the engine.
